

WHAT IS CLAIMED IS:

1. A performance information display method using a computer, comprising the steps, in the computer, of:

reading out information data of a storage device previously stored in a storage device and information data of a plurality of devices utilizing the storage device;

displaying an identifier of the storage device and identifiers of a plurality of devices utilizing the storage device on a screen on the basis of the information data read out;

accepting a command to select the displayed identifier of the storage device; and

displaying performance information data of the devices utilizing the selected storage device in association on the basis of the accepted command and the information data read out.

2. A performance information analysis method in a system including a storage device and a plurality of servers, the performance information analysis method comprising:

a server volume performance information collection step of collecting performance information data for respective volumes on respective servers;

a server storage mapping information collection step of collecting identifiers of resources in the storage device utilized by the respective

volumes on the respective servers; and

a narrowed down server volume performance information output step of narrowing down only server volumes utilizing a specific resource in a specific storage device from the collected performance information data by using the specific resource as a key, and outputting performance information data of the server volumes narrowed down.

3. The performance information analysis method according to claim 2, wherein said server storage mapping information collection step comprises a substep of acquiring mapping information by issuing a SCSI inquiry to volumes on the servers.

4. The performance information analysis method according to claim 2, wherein

said server volume performance information collection step comprises a substep of storing performance information data in time series order, and

said narrowed down server volume performance information output step comprises a substep of outputting performance information data of narrowed down servers in time series order.

5. A method for executing collection and analysis of performance information by using mechanical processing in a system in which a plurality of servers share a storage device, the method comprising:

a storage performance information collection step of collecting performance information data of

resources in the storage device;

a server volume performance information collection step of collecting performance information data for respective volumes on respective servers;

a server storage mapping information collection step of collecting identifiers of resources in the storage device utilized by respective volumes on respective servers;

a storage resource selection step of displaying resources within the storage device and their performance information data, and making a user arbitrarily select a resource included in the storage device; and

a narrowed down server volume performance information output step of narrowing down only server volumes utilizing a specific resource within the storage device from the collected performance information data by using the specific resource as a key, and outputting performance information data of the server volumes narrowed down.

6. The method for executing collection and analysis of performance information by using mechanical processing according to claim 5, wherein said server storage mapping information collection step comprises a substep of acquiring mapping information by issuing a SCSI inquiry to volumes on the servers.

7. The method for executing collection and analysis of performance information by using mechanical

processing according to claim 5, wherein

said server volume performance information collection step comprises a substep of storing performance information data in time series order, and

said narrowed down server volume performance information output step comprises a substep of outputting performance information data of narrowed down servers in time series order.
